

The main function of **FÉMALK Fémöntészeti és Alkatrészgyártó Zrt.**: production of high-pressure die casting aluminium parts.

The key technologies:

melting

high-pressure die casting

surface treatment

machining

assembly

Our scope is to take into consideration in each manufacturing steps the environmental effects. We acknowledge, that our technology has a significant ecological foot. Due to this fact, we have integrated the environmental policy as the basis of our activity field.

We have adapted the ISO 14001:2015 specification, and we are proud of our already achieved environmental results. In order to have a mutual confidence with our business partners, we continuously improve our sustainability system.

In order to achieve our goals:

- We are committed to the protection of the environment
- We minimise the environmental emission
- We keep in touch with the governmental authorities
- We specify environmental targets including programs, which are monitored continuously
- The waste management involving the recycle is especially important
- We continuously reduce our emissions, using dust separators (air protection)
- We discover and track all the losses in our system, so as we are able to improve the efficiency (water protection)
- We often keep internal audits on our sites, based on the received information, we are able to improve our Environmental Management System.
- We always make reports to the correspondent colleagues about the Environmental Management System.
- We require from our suppliers to perform their activities according to the Environmental Management System
- By our regular environmental education we require from our colleagues that they adapt an environmental friendly way of thinking during their every days routine
